

PanNuke-Core OOD Evaluation Protocol

single-source supervised training on PanNuke; zero-shot transfer to non-PanNuke microscopy domains

Evaluation pressure ladder

Core-domain test

PanNuke test n=336

No target adaptation

same metrics, same protocol

Far-OOD test

non-PanNuke n=1795

The protocol separates in-domain fitting ability from cross-domain generalization under optical/staining shift.

Protocol rule

PanNuke-trained supervised baselines use only the core train split; all non-PanNuke images are reserved for Far-OOD evaluation.
